spoken: very good
written: good

IT COMPETENCES

- Setup and improve continuous integration pipelines (Jenkins)
- Server provision following infrastructure as code principles (Ansible)
- Install and configure web servers + related components (Lamp, Nginx, Varnish, Redis, Memcached etc..)
- scripting (Bash, Python, Lua)
- Follow up and improve the configuration and architecture of the IT-systems depending on the evolution of the components and needs of the user
- Implement, manage and maintain TCP/IP networking infrastructure (routing, firewalling, subnetting ...)
- Setup and configure systems for monitoring and securing the IT-systems
- Assist development teams with choice and implementation of technical solutions (devops principles)
- Identify and diagnose incidents, malfunctions or irregularities and take actions accordingly
- Define access control as defined by the characteristics of the user or service
- Power user of Linux (Debian based distros) and Windows systems
- Accustomed to usage of ticketing systems to follow up on tasks and time tracking
- Create and maintain structured documentation

PERSONAL COMPETENCES

- eager to learn
- strong analytic capabilities
- self-critical
- swift communicator, both verbally and written
- result-driven
- positive attitude

VARIA

In my spare time I am into dj-ing and creating music with both soft- and hardware, and I perform a weekly radioshow at Urgent.fm (local FM radio). To enable my music hardware and computer work together as seamlessly as possible I create software that enables the pc to communicate with my midi-capable devices like synths, samplers and various other modules. To create these applications I plow through the technical manuals of the devices, or if those are not available I analyse the datastreams they generate on specific action, and model the software to that.
